

MiniFert

Slave single channel fertilizer injection

The Goldtec MiniFert is a single channel fertilizer injector.

Utilizing venturi and booster pump offers accurate and reliable fertilizer injection in open field horticultural and agricultural applications.

With the booster pump using single phase power and solenoid and fertilizer meter that connected to an irrigation controller allows for integrated operation that is most suitable in particular with the Goldtec family of irrigation controllers

Assembled with quality components and corrosion resistant frame provides long term operation.

MiniFert features:

- 2 injection rates available:
 - max. 400 l/hr
 - max 1000 l/hr
- Suitable for system pressure up to 800kPa
- Very accurate
- Very simple to connect to suitable irrigation controller
- Assembled with high quality components
- Assembled locally, pipe size compatible
- No moving parts
- Corrosion resistant modular frame

A cost effective, reliable fertigation solution
