

# MINI SAPIR 2 MONITORING

*Tank monitoring options*

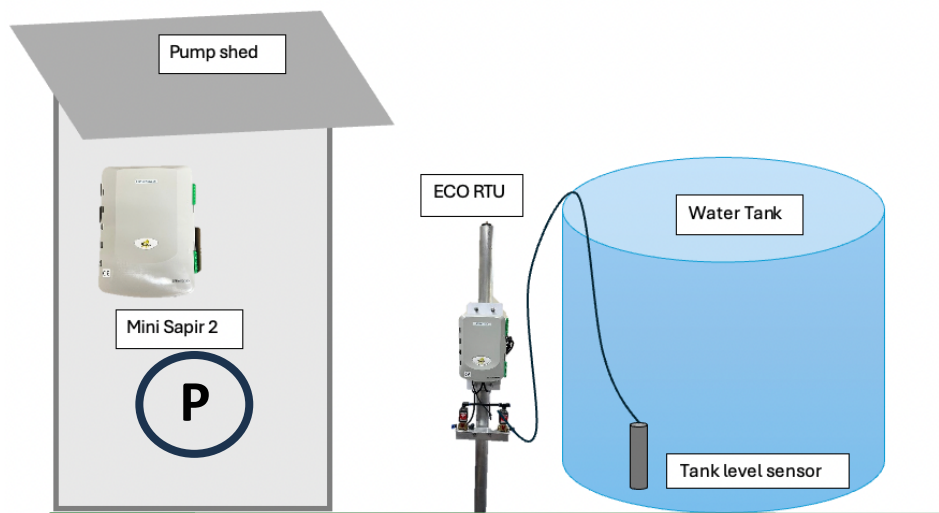

## Tank Level Monitoring

Using the **Mini SapiR2** and a **tank level sensor** we are now able to offer a more cost-effective method to monitor tank levels and give you readings of what the levels are at, you are also able to format that information into graphs for easy viewing.

## Tank Monitoring & Pump Start

By adding in 1 **ECO RTU** to the system as well as monitoring the Tank levels, the **Mini SapiR2** can be in the pump shed on site and start your pump to fill the tank based on the readings you are receiving from the tank level sensor which is connected to the ECO RTU. Water will start filling when the tank is low and will stop filling when the tank gets full.
